

METHOD, SYSTEM AND STORAGE MEDIUM FOR DYNAMICALLY SELECTING A PAGE MANAGEMENT POLICY FOR A MEMORY CONTROLLER

Abstract

A method for operating a memory controller including receiving a current memory access request from an agent. A page management policy associated with the agent is determined in response to receiving the request. The memory controller is set to the page management policy associated with the agent and the current memory access request is executed on the memory controller. The results of the executing are transmitted to the agent.
